Thin tetrahedra change orientation along the frozen vertex trajectories
Old Forward, CFL .3, step 1
Zero at s = 0.164256
Endpoint q = 7.36e-05
Oriented volume / native-endpoint volume
Step fraction s
New Pullback, CFL .1, step 11
Zero at s = 0.864249
Endpoint q = 5.79e-05
Campoli opening-ratio threshold = -1
Oriented volume / native-endpoint volume
Step fraction s
